

Karim Tantawy

JUNIOR PENETRATION TESTER

Cairo | karim.engmohamed@gmail.com | [LinkedIn](#)

About me

Security researcher with a proven track record of identifying 50+ vulnerabilities across HackerOne and Bugcrowd. Specialized in Web and API security. Committed to strengthening system defenses through manual testing and automated security tooling.

Experience

Bug bounty hunter – Hackerone & Bugcrowd

2024-Present

- Worked on real-world security challenges, improving system defenses
- Identified multiple bugs, boosting the system's reliability
- Strengthened user data security through advanced protection measures.

Security Research & CVEs

- **CVE-2026-24040** (jsPDF): Discovered a Race Condition in the addJS method leading to cross-user data leakage in concurrent environments.
- **CVE-2026-24043** (jsPDF): Identified an XML Injection vulnerability in addMetadata allowing arbitrary XMP metadata injection.
- **CVE-2026-24133** (jsPDF): Discovered a Denial of Service (DoS) flaw via improper memory allocation in BMP image parsing.

Education

Mansoura University, Electronics and Engineering dept.

2022-2027

Grade: 91.13%

Volunteering

CAT Reloaded (Cybersecurity) - Member

12/2024-11/2025

Conducted deep-dive research into web vulnerabilities and contributed to technical labs.

CAT Reloaded (Cybersecurity) – Vice Leader

11/2025-present

Technical Instruction: sessions for 70+ members on advanced Web Penetration Testing.

CTF Author: Authoring CTF challenges involving challenges that simulate real-world attack vectors.

Assessment & Mentorship: Evaluated team members with a structured task-based evaluation system to grade member proficiency and bridge technical skill gaps.

Technical skills

Web Penetration Testing

- Ability to identify OWASP top 10 and beyond within web apps.
- Ability to use different purpose tools (FFUF, Sqlmap, Burpsuite, etc...).
- Ability to conduct static analysis using effective code review.

API Penetration Testing

- Ability to identify Authentication & Authorization issues within APIs
- Ability to identify web vulnerabilities within APIs (SQL Injection, SSRF, etc ...)
- Ability to identify API issues including mass assignment, API versioning , etc...

Mobile Penetration Testing

- Ability to conduct static analysis and reverse engineering on Android applications.
- Ability to bypass client-side protections (SSL Pinning, root/jailbreak detection) using Frida and Objection.
- Ability to identify insecure local data storage (SQLite, Keychains) and insecure communication protocols.

Courses and certifications

- CASA: [Certified API Security Analyst](#) [APISec university, 2026]
- Python [Mahara tech + self-study]
- EWAPT (self study)
- Linux+ [Tryhackme + self-study]
- Cryptography [Introduction to mathematical cryptography book]
- Jr penetration tester [Tryhackme]

Projects

- Disease prediction app [machine learning]
- Number theory problems solver for cryptography

Achievements

- **0xL4ugh CTF Team:** Core member of the #1 ranked CTF team in Egypt (CTFtime). Actively competing in international high-tier competitions with a focus on Web and Mobile security.
- **CVE Author:** Discovered and registered 3 CVEs (CVE-2026-24040, CVE-2026-24043, CVE-2026-24133) in the widely used jsPDF library.
- **Aswan UEA CTF:** Secured 1st Place in the Qualifications phase and 4th Place in the Finals.
- **National CTFs Finalist:** Qualified for and competed in the finals of Egypt's most prestigious security competitions, including CyCTF and ICMTC CTF, facing the nation's top cybersecurity talent.
